USR Courier® M2M 4G Cat1 Cellular Gateway
USR3513, USR803513
Ad Content

One Liner

USR M2M 4G/LTE Cat.1 Cellular Gateway provides LAN-to-WWAN routing ideal for traditional IoT applications.

Key Messages

- For use in mission critical applications that require always on persistent connectivity 24/7, including remote monitoring & maintenance, ATMs, digital signage, and limitless other traditional M2M/IoT applications
- Easy transition from analog to long term cellular solution
- One device for multiple carriers – including Verizon and AT&T (USR3513 only)
- Simple, affordable intelligent 4G Gateway that is easy to deploy and manage, but will maintain stable connections — without the high price tag
- Wired and Wireless LAN-to-WWAN routing — Ethernet to LAN, Serial to LAN, Serial to Cellular, and Ethernet to Cellular
- Connect serial or Ethernet based applications out in the field to wireless and replace costly landlines
- Ideal for Managed Service Providers or IT departments providing remote monitoring and diagnostics

Customer Benefits

1. 4G Cat 1 Gateways provides low volume data solutions with lower hardware costs
2. Stay in front of cellular service obsolescence with a 4G product
3. Easy to use embedded web interface for simple and fast installation, configuration, and deployment.
4. Preferred Provider Partners make finding an MVNO simple and easy -- even for small businesses!
5. Cost savings by pooling data packages and tracking data usage.
6. Readily available throughout the channel for quick delivery and installation.

10 words

Simple and flexible 4G cellular connectivity for cost-effective, dependable M2M Solutions.

25 words

USR® 4G Cellular Gateway provides flexible deployment options with support for all major 4G Cat 1 cellular networks in one powerful, yet cost-effective device.

50 words

The USR® Courier® M2M 4G Cat 1Cellular Gateway with embedded module certified for all major LTE Cat 1 cellular networks provides easy, cost-effective LAN-to-WWAN routing. The embedded serial port allows quick implementation for serial-based systems already out in the field making it ideal for Point of Sale, ATMS, and remote maintenance and control.

100 words

The USR® Courier® M2M 4G Cat 1 Cellular Gateway provides cost effective LAN-to-WWAN small to medium volume data transfer on all major 4G cellular networks. Lower cost Cat 1 hardware reduces overall costs significantly while lowering the entry barriers to a wide range of M2M solutions making for an easier transition from analog to a long term cellular solution. With an embedded serial port, the gateway allows quick implementation for a wide variety of serial-based systems already out in the field — making it ideal for M2M Serial applications including remote maintenance and control, Point of Sale, ATMs, monitoring, and automation.
