Take advantage of faster USB transfer speeds!

As you start upgrading to USB 3.0 devices you'll want to have more USB 3.0 Cables around so you will always transfer data at the fastest possible rates. The Standard USB 3.0 Cable (USR8403) and Standard USB 3.0 Micro Cable (USR8404) are ideal as backup cables for the new 3.0 devices. Need a longer cable? Extend any USB 3.0 Cable with the USB 3.0 Extension Cable (USR8405) and save instead of buying longer cables you may not need. And for the special situations like manual switchboxes and certain USB adapters we have the USB 3.0 A-A Male Cable.

All cables transfer data at 4.8 Gbps when used with USB 3.0 devices and ports making it up to **10 times** faster making those transfers fly -- saving you time.

Cable Applications

- Keep extra cables on hand in case of emergency - cable failure or missing cable
- Extend any USB Cable an additional 6 ft with an Extension Cable

USB 3.0 SuperSpeed

Why USB 3.0?

- Transfer mass amounts of photos, videos, files up to 10 times faster
- New power management - increased power for charging or running high power devices
- Supports Plug and Play functionality
- Manufacturers will be transitioning USB devices to 3.0
- All USB 3.0 adapters and hubs are backward compatible with USB 2.0 and 1.1

USR USB 3.0 - faster transfers means more time for YOU.
