

## Streamline OoB devices with the new USRobotics Courier Console & Power Hybrid Solution

- **Immediate cost savings** - use only 1 Out of Band modem (analog or cellular) for all connected devices; reducing the number of costly phone lines
- Combined console server and PDU unit **saves rack space** in small IT closets
- Hybrid unit **remotely power cycles and configures** servers, routers, or other devices quickly and efficiently from remote locations
- **Current meter on every 8 Amp power port** measures load and provides easy monitoring when power cycling
- Compact desktop solution for minimal demands or small physical locations, with optional 1U 19" rack mount
- **Username and password security** with unauthorized lockout
- Country approvals for Europe in addition to North America
- Ideal for IT Managers looking for an **optimized solution** to reduce the quantity of modems, phone lines, and rack space in data centers or remote locations while providing mission critical access to networks
- Expandable to up to 256 devices via cascading

For small installations other solutions have too many ports...  
**Why pay for what you don't need?**

## Extra Security when used with USRobotics Courier Modems....

- Dial security for up to 80 users:
  - Autopass automates logging in between two Couriers by including the password in the V.42 error-control request (over 200 trillion combinations)
  - Password Prompting, works with any type of modem, where the host Courier requests a password from those dialing in
- Dialback security checks incoming calls for password authorization and then dials back predefined numbers to assure only appropriate users establish connections
